TURNOUT EXCEEDS OPTIMISTIC PREDICTIONS

MORE THAN 122 MILLION VOTE

HIGHEST TURNOUT IN 38 YEARS

WASHINGTON, January 14 – Propelled by a deeply emotional political polarization fostered by the policies of the Bush Administration, unprecedentedly extensive and expensive voter mobilization efforts, particularly in battleground states, and a perceived very close election, voter turnout reached its highest level since 1968, exceeding most experts prognostications.

Based on final and official tallies from 50 states and the District of Columbia, 122,265,430 citizens voted for President, a turnout rate of 60.7 percent of those eligible to vote and the highest turnout since 1968 when 61.9 percent of eligibles voted.

Voter turnout increased by nearly 17 million votes and by 6.4 percentage points from the election of 2000, the largest percentage point increase since 1952 when voter turnout increased by 10.1 percentage points over the turnout in 1948.

President George W. Bush received 62,028,719 votes (50.8 percent of the vote and 30.8 percent of the eligible electorate, the first time a Presidential candidate received more than 30 percent of the eligible vote since Ronald Reagan's 1984 landslide victory in 1984 (32.9). It was also the first time an elected President received more than a majority of the vote since 1988.

Committee for the Study of the American Electorate

Sen. John Kerry received 59,028,550 votes which constituted 48.3 percent of the ballots cast for President and 29.3 percent of the eligible vote. His percentage of the eligible vote was the highest for a Democratic Presidential candidate since the 1964 landslide when Lyndon Johnson garnered 38.6 percent of the eligible vote.

President Bush gained more than 11.5 million votes over his 50,455,186 total in 2000. Kerry gained more than 8 million beyond the 2000 total of 50,995,561 received by Vice-President Al Gore.

Ralph Nader received 440,513 votes or less than 0.4 percent of the vote and 0.2 percent of the eligible vote.

Despite the sharp rise in turnout, more than 78 million eligible citizens eschewed voting, a figure larger than those voting for either major party candidate.

These were among the principal findings of a report released today by the non-partisan Committee for the Study of the American Electorate (CSAE) on voter registration and turnout based on final and official registration and voting statistics certified by the chief election officers of 50 states and the District of Columbia and based on the number (201,541,000) of citizens 18 years of age and over.

Among the other findings in this report:

–Turnout increased substantially more in the 17 battleground states. Turnout went up by 8.3 percentage points between 2000 and 2004 in battleground states, compared to 5.4 percentage points in states which did not see concentrated Presidential campaign activity. Democratic turnout increased by 4.5 percentage points in battleground states compared to 2.2 in non-battleground states. Republican gains were more even, up 5.3 percentage points in battleground states, up 4.5 in the other states.

–For the third consecutive Presidential election and the sixth election overall (including mid-term elections), the Republican share of the eligible vote cast for U.S. House of Representatives (28.0 percent) exceeded the Democratic share (26.1). Prior to 1994, the Democrats had enjoyed a greater share of the House votes since 1932, with the exception of the 1946 election.

–Registration increased by an estimated (see note 3) three percentage points to 71.0 percent of eligibles, the highest level since 1964 when an estimated 72.1 were registered. Total registration is estimated to have been 143,000,000 as compared to 133,780,000 in 2000, an increase of nearly three million more than the increase in the eligible population and more than six million had registration rates remained constant.

–Democratic registration increased by a very small 0.5 percentage points in the 28 states and District of Columbia which have partisan registration to an estimated 36.8 percent of

eligibles, far below the recent high of 49.4 in 1964.

–Republican registration increased by an even smaller 0.2 percentage points to 28.0 percent of eligible, which is, however, its highest level since the 1950s.

–Registration as independents and for parties other than the two majors continued its increase, an increase which has occurred in every Presidential election year since 1960. In 2004, non-major party registration increased by 2.1 percentage points to 21.7 percent of the eligible electorate. In 1960, only 1.6 percent of the eligible electorate registered as independents.

–Unlike most recent Presidential elections, in only one state and race (the Daschle-Thune U.S. Senate race in South Dakota) did turnout for a race below the level of President exceed the Presidential vote and there only by 3,000 votes.

–Despite getting the highest percentage of the eligible vote by any Democratic candidate since Lyndon Johnson in 1964, Kerry proved to be a weak candidate and a drag on other Democratic aspirants. Kerry ran behind statewide candidates (for U.S. Senate and/or governor) in 30 of the 37 states which had such statewide races and behind the aggregate total for Democratic House of Representative candidates in Maine. He probably cost the Democratic Party statewide victories in Alaska, Missouri, Oklahoma and South Dakota and probably made the Washington gubernatorial race closer than it would have been. In contrast, President Bush ran behind statewide candidates in only 16 of the 37 states with such races. In January 2004, there was virtually no Democrat in the nation who said he would vote for President Bush and many moderate Republicans were prepared for a one-election bolt from their party – either by staying home or voting for a Democrat. By election day, if exit polls are to be believed, more Democrats defected from their party than Republicans.

–What evidence exists seems to indicate that President Clinton's last week foray into the Presidential race hurt rather than helped the Democrats – that he succeeded in mobilizing more Democratic opponents than he galvanized supporters. He campaigned for eight candidates and in five states (Arkansas, Florida, New Mexico, Nevada and Pennsylvania). As Hotline Editor Chuck Todd wrote in the current Atlantic Monthly, all eight candidates lost and former White House Chief of Staff Erskine Bowles lost his North Carolina Senate bid because of his identification with Clinton. Pre-election polls showed Kerry and the Democrats running better in each of the states Clinton campaigned in than the actual election results.

–New high Presidential turnout records were set in seven states and the District of Columbia – Alaska (69.9 percent of eligibles), DC (58.2), Florida (63.9), Georgia (53.8), North Carolina (56.4), South Carolina (51.9), Tennessee (54.6) and Virginia (60.5).

–The GOP set new record highs in eight states – Alabama (34.4 percent of eligibles), Georgia (31.2), Kentucky (34.1), North Carolina (31.6), South Carolina (30.1), Tennessee (31.0), Virginia (32.5) and Wyoming (40.9) – all southern states except Wyoming, indicating, at least for this election, a strengthening of the Republican hold on the South.

–The Democrats scored a record high only in the District of Columbia at 51.9 percent of the eligible vote. There were no record lows and, in only one states and one party, Alabama and the Democrats, were there any decreases in the voting percentage of eligibles between 2000 and 2004.

–The highest overall turnout was recorded in Minnesota (77.3 percent of eligibles), followed by Maine (75.3), Wisconsin (73.9), New Hampshire (71.9) and Oregon (71.2).

–The greatest increase in overall turnout was recorded in South Dakota (up 10.62 percentage points), followed by Florida (10.57), Ohio (9.9), New Hampshire (9.2), New Mexico (8.96), Nevada (8.95), Pennsylvania (8.8), Arizona (8.77) and DC (8.73).

–The highest Democratic turnout was in the District of Columbia (51.9 percent of eligibles), followed by Maine (40.3), Massachusetts (40.1), Minnesota (39.5) and Vermont (39.2).

–The greatest increase in Democratic turnout was also recorded in DC (up 9.8 percentage points), followed by Maine (7.1), Oregon (7.0), New Hampshire (6.8), Vermont (6.34) and Minnesota (6.32).

–The highest Republican turnout was recorded in Wyoming (44.1 percent of eligibles), followed by Alaska (42.7), Utah (41.8), Idaho (41.6), South Dakota (40.9), Nebraska (40.8) and North Dakota (40.7).

–The largest GOP increase in turnout was in Oklahoma (up 7.4 percentage points), followed by Florida (7.2), New Jersey (6.6), Arizona (6.5), Georgia (6.4) Utah (6.2) and South Dakota (6.1).

–The state with the lowest turnout was Hawaii (48.9 percent of eligibles) followed by Arkansas (51.3), South Carolina (51.9), Texas (52.2), Mississippi (52.9) and West Virginia (53.1).

–The state with the lowest Democratic turnout was Utah (15.2 percent of eligibles), followed by Idaho (18.4), Wyoming (18.6), Oklahoma (19.5), Texas (20.0), Nebraska (20.25) and Alabama (20.3).

–The District of Columbia showed the lowest GOP turnout (5.4 percent of eligibles), followed by Hawaii (22.1), Rhode Island (22.5), New York (23.7), Massachusetts (23.8), Vermont (25.8) and California (26.6).

–The 24 states with no excuse absentee voting (where an individual need give no reason for requesting an absentee ballot) had a turnout performance at virtually the same level as the states which did not have that provision in their election laws. Turnout increased in no excuse absentee states in the aggregate by 6.7 percentage points as opposed to 6.2 for the other states.

Still this performance is better than every previous election – both Presidential and mid-term – when the states with no absentee voting in each year recorded worse performances – greater declines in years of decline and lesser increases in years of increase. For the GOP, there was virtually no difference in the turnout performance in no excuse absentee states (up 4.84 percentage points) and other states (4.78). While the Democrats had lesser increases in both no excuse absentee states (3.5 percentage points) and the others (2.8), there was some differential.

–For the second consecutive election (2002 being the previous one), the 11 early voting states (where the state creates convenience satellite locations for people to vote early – but not necessarily often) showed a small but positive impact on turnout. Turnout increased by an aggregate average of 7.2 percentage points in early voting states as opposed to 6.2 in the states without early voting. There was virtually no difference in Democratic voter turnout in early voting states (up 3.09 percentage points) as opposed to other states (3.07). The GOP, however, did better and took greater advantage of early voting (up 5.1 percentage points in early voting states as opposed to 4.7 percentage points in the other states). Prior to 2002, early voting showed the same negative effect on turnout as did no excuse absentee.

–The 2004 impact of Oregon’s all-mail balloting shows the same mixed picture with respect to turnout as it did in the 2000 Presidential election. Oregon’s turnout increased by (8.2 percentage points) which was greater than the national average of a 6.4 percentage point increase but it was slightly less than the 8.3 percentage point increase of the aggregate average of battleground states of which it is one. More pertinently there were nine states and the District of Columbia which recorded greater increases in turnout than Oregon, none of whom resorted to all mail voting. Of these jurisdictions which had greater increases than Oregon, Ohio, Pennsylvania, Georgia and the District of Columbia have neither no excuse absentee, early voting or election day registration.

–The six states with election day registration had, as they have had for every close election since this reform was adopted, a better performance than the other states in the aggregate and this reform benefitted the Democrats in 2004. The overall increase in turnout in election day registration states was an aggregate average 7.5 percentage points as opposed to 6.4 percentage points for states without it. Democratic turnout gained 5.4 percentage points in election day registration states and only 2.9 in the other states. GOP turnout performance was slightly lower than the Democrats in election day registration states, up 4.84 percentage points and virtually identical with their performance in states without election day registration, up 4.80.

COMMENTARY

In certain respects, the 2004 election was all about motivation and mobilization. The substantial increase in turnout was due largely to the deep emotions surrounding the Presidency of George W. Bush. Almost all of Sen. Kerry's vote was anti-Bush. Much of Bush's vote was an affirmation based, in part, on fear. Bush won on leadership, personality, the war on terrorism and the undesirability of changing direction to an uncertain leadership in the midst of that war, on steadfastness and on clarity and on Kerry's lack of those qualities. Kerry's vote came from those unhappy with the war in Iraq, the economically insecure, those who questioned Bush's veracity, compassion and competence, those who saw the nation going in the wrong direction.

The strong emotions surrounding these issues provided fertile motivational ground for mobilization. Both parties spent unprecedented resources on mobilization – the Republicans directly using hard money voter identification, the Democrats through outside groups targeting likely Democratic voting constituencies. And, it is virtually certain that both parties succeeded. When reliable demographic turnout figures come in (when the Census Bureau completes its biennial survey on registration and voting), it is virtually certain that turnout increased among all demographic groups, but especially among certain targeted constituencies for each party – particularly rural voters for the GOP and the young in battleground states for the Democrats.

The Republicans were, as the results have revealed, more successful. While it is impossible to do more than educated speculation on why, it is likely that the Republicans succeeded because they had a better plan and a better candidate. From the outset of the Bush Administration in 2001, Karl Rove had a plan, a very risky and controversial one – to build upon the conservative wing of the GOP, those religious, evangelical fundamentalists and to broaden the appeal, not necessarily to the middle but to previously low voting cohorts such as rural voters. To that end (and with the substantial assistance of the events of 9/11), the party pursued policies designed to build continuing support within these groups and to create, through the Republican National Committee, a centralized voter identification and mobilization capacity which had tentacles in the targeted communities and beyond. It was a four-year effort that was tested successfully in the mid-term election of 2002.

The Democrats, on the other hand, did not really begin their mobilization activities until mid-2003 and then handed the bulk of the work to outside groups – the labor movement, Americans Coming Together, etc. They also never developed a coherent definition of who they were and why their differences with the President were compelling, choosing instead to hand this task to consultants to invent on the fly which they did very badly.

The Republicans also had, as it turned out, a much better candidate. The idea of John Kerry – war hero, prosecutor, moderate liberal – was always more appealing than the reality. Kerry was humorless, ponderous, windy, lacking in passion and emotion, cerebral, and with a tin ear for his audiences. There was never any question as to which candidate the electorate would

rather share a beer with. Kerry also lacked clarity on almost every issue, save health care. It took him until late September to find and stick with a position on Iraq and because of that he always was suspect. He never presented a vision for the present and future, rather relying on a tactical critique of the President along narrow issue lines. He joined the President in conducting the most scurrilous Presidential campaign in modern history. He seemed to change and tailor his views to the polling results of the moment and often seemed to be engaging in outright pandering – the duck hunt (reminding some of Michael Dukakis in a tank) and the claim that the President would reinstate the draft, to name but two. He never seemed to grasp that stem cell research was a peripheral issue, that a woman's right to choose was not a sufficient criterion for a Supreme Court nominee or that Halliburton was not a central political concern. Had it not been for the first debate in which he performed adequately and the President performed miserably (and despite a polling and issue climate which, in almost any other time and against any other candidate, would have meant certain defeat for the incumbent), Kerry would have lost by a landslide. For the better part of a year, polls showed that on the generic question of whether the President should be re-elected or should someone else take the reins of the Presidency, someone else won. Kerry was never able to establish himself as the credible someone else.

The Democratic Party could take some small solace from their showings in three western states – Colorado, Montana and Oregon – in all of which they re-established their control of the state legislatures and, at least in the case of Colorado, were victorious for statewide and Congressional offices. But, those victories are small balm for a party who lost a Presidential race it should have won and lost ground in both houses of Congress. Unless they emulate the Republicans in defining a perspective and building a sustaining grassroots organization, they will not likely regain the dominance they enjoyed from the Depression until the Reagan Presidency.

A 50.8 percent of the vote showing is not a significant mandate for the President nor is it a sign of a permanent realignment. The Republican Party has been in the ascendancy largely because of its increasing dominance of southern politics. But they have been losing ground in the west, are virtually shut out in New England (except New Hampshire), are in the minority for most offices in the Middle Atlantic States and are, at best, at parity in the industrial heartland. At present, there is a political polarization which has benefitted the Republicans because of Democratic weakness – in lack of coherent message and grassroots organization – rather than because of Republican policies which are often at odds with majority popular political views.

But the polarization which exists now on the national level and in many state legislatures is not healthy for either American democracy or for progress on the address of many present and future policy and social problems. Gridlock on central issues and sterile debate over peripheral ones benefits no one. This condition is a direct result of low primary turnout and the way most states draw districts for both Congress and state legislatures. Either for reasons of securing and extending one party dominance in states in which a party controls both the governorship and state legislature or to protect incumbents in states where party control is divided, the drawing of districts has led to an ever-greater number of one-party districts for both of these offices. The result is that for these districts the relevant election is not the general election but the primary. In 2004, the average turnout for a statewide primary (for governor or U.S. Senate) in the

Democratic Party was 10 percent of eligibles. The average turnout in similar Republican primaries was eight percent. Turnout was lower for Congress and even lower for state legislative seats. The result is that organized minorities representing less than four percent of the electorate can propel primary victories for their favored candidates in primaries and, by virtue of that, elect them to public office. And the organized minorities which exist are at the right extreme of the Republican Party and potentially (though not presently) on the left extreme of the Democratic Party. Beyond the public policy problems the present way of drawing districts poses, it also creates a residual problem as these comparatively fringe new officeholders also are the primary reservoir for candidacies for higher office, increasing and extending the polarization to every level of government. The most important single procedural reform to be addressed in the nation is creating ways, as Iowa has done, of non-partisan drawing of districts that maximizes competition and restores the broad electorate of the general election to its proper role in determining leadership. Government by tiny interest group putsch is antithetical to the national interest.

There are other procedural issues which were raised in the 2004 campaign that are also important:

–Do we want to continue an electoral college system that has for two straight elections focused campaign activity in only 18 states and has created a situation in which the electoral votes of one state can reverse the plurality or majority vote of the electorate or should we explore either a proportional statewide or Congressional district vote (with competitive districting) as the means of selecting electors?

–Do we want to continue a nominating system that requires long ersatz campaigns to raise money for a truncated and grouped set of primaries that enhances the importance of two small states, rushes to judgement, does not allow sufficient time for the evaluation and re-evaluation of potential nominees, undermines party flexibility and puts the nomination of the most important office in the most powerful nation in the world in the hands of five percent of the electorate?

–Do we want to continue to have elections conducted in the most execrable manner in which scurrilous televised political advertising undermines debate and accountability and casts a miasma over the entire political process?

–Do we want to continue to go down the campaign finance reform road which has driven money from the accountable, the candidates, toward the least accountable and most inflexible groups in American society, outside interests, and has undermined systemic flexibility?

–Do we want to continue the conduct of elections without some uniform standards for accountability of voting machinery and software; who, under what conditions, qualify for provisional ballots; how votes are counted; adequacy in the number of polling places and polling stations within those polling places to prevent long lines; counting of ballots; definition of, protection against and prosecution of perpetrators of fraud and intimidation, to name but a few?

–Do we want to continue along the line of so-called convenience voting (no excuse absentee, early voting and mail voting) when there is no evidence that these reforms have a positive effect on voter turnout and pose certain serious risks in undermining the secret ballot and making possible differentials of information in which significant events in the last days before election day will not be considered by as many as 30 million Americans who will have cast irrevocable ballots?

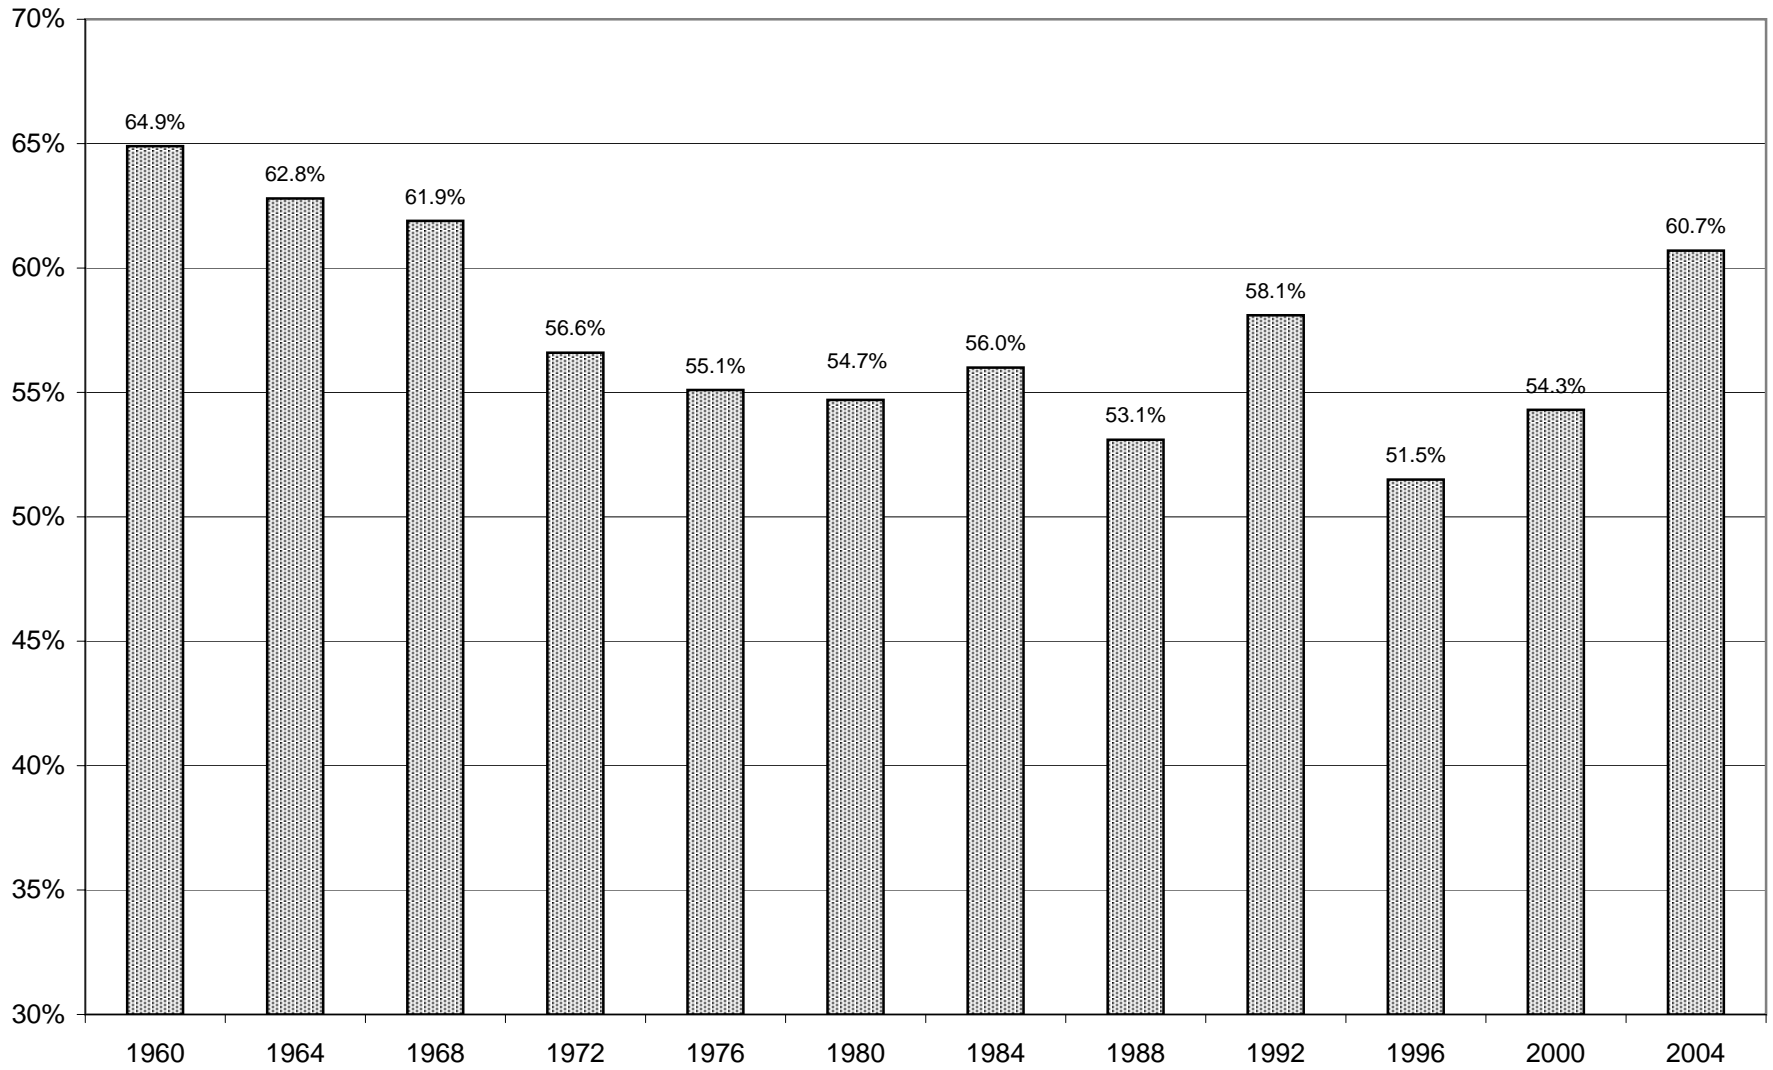

–Do we want to continue to allow otherwise useful exit polls to continue to be used for projecting winners when they tend to get it wrong in close elections, drive people from the polls in one-sided elections (undermining the integrity of the vote) and when there is a much more accurate way of arriving at the results of elections which will never be premature and never be wrong – the reporting of the actual vote count?

These questions beg for constructive answers.

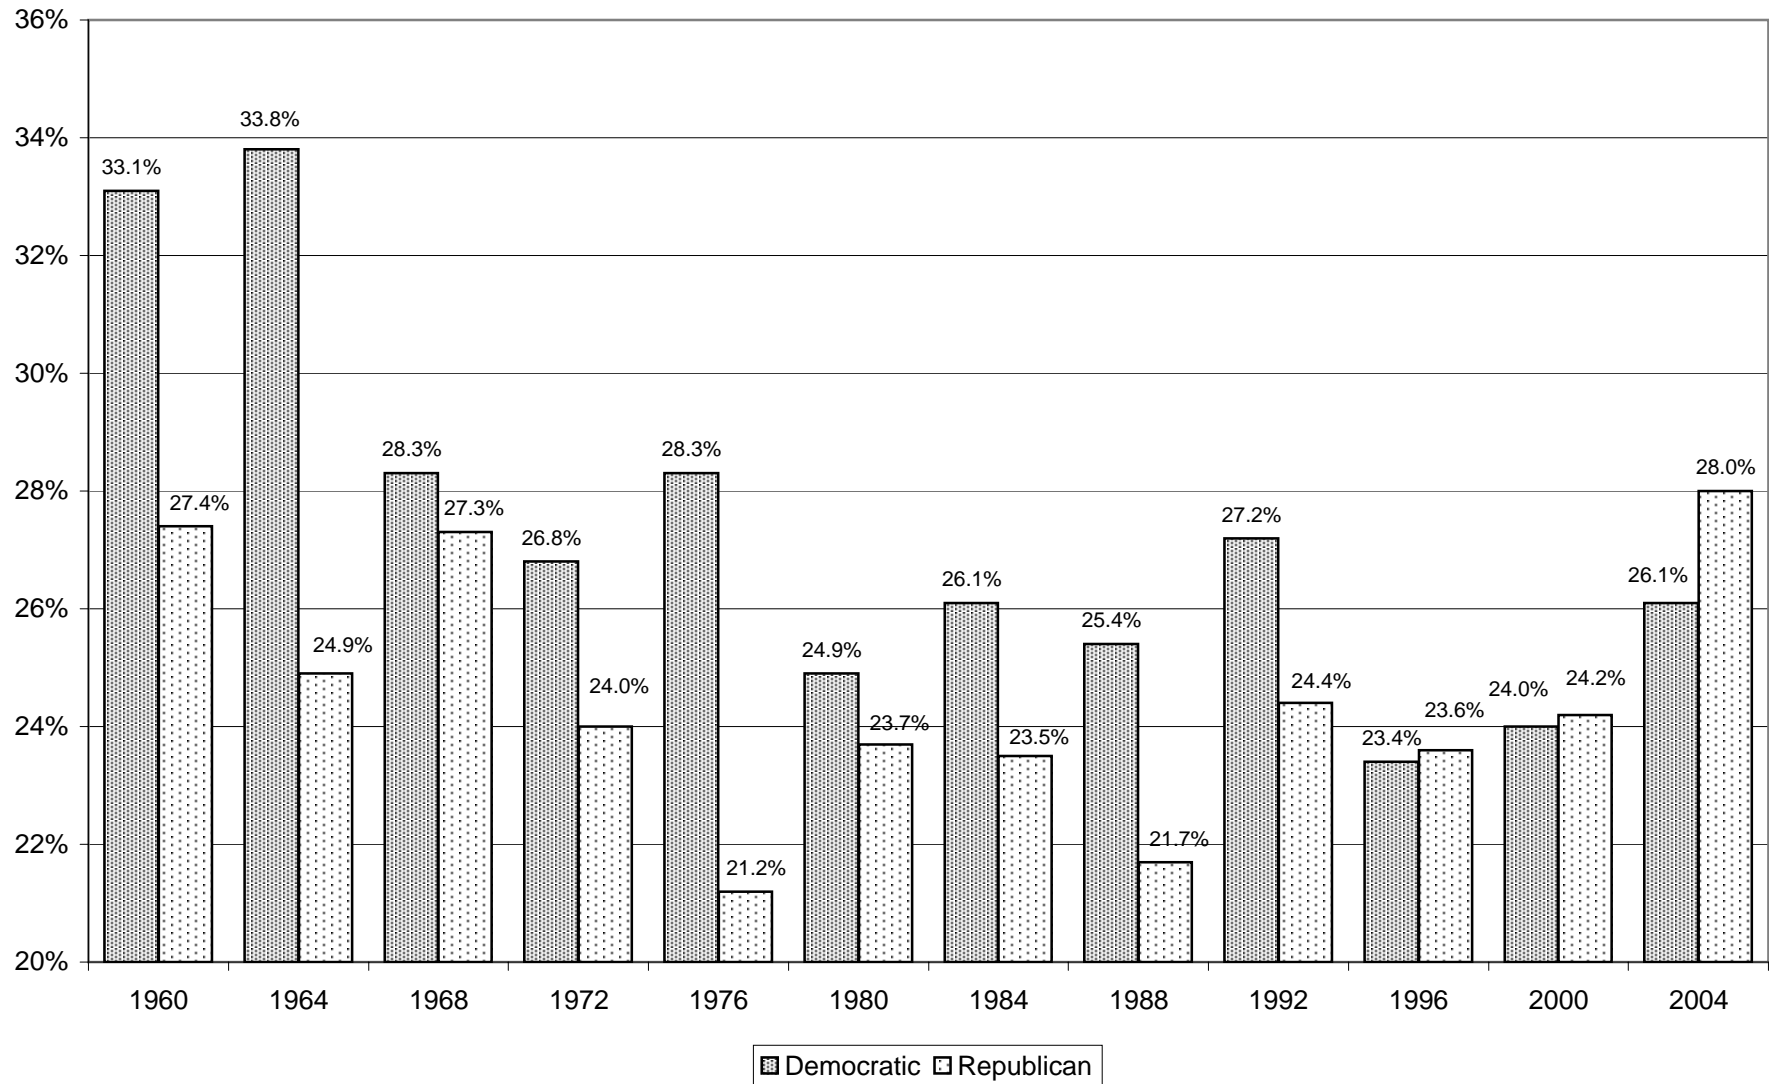

While the nation can be grateful for the substantial turnout rise in this election, it cannot be happy about the polarization that was its genesis. And the fact that more than 78 million eligible Americans failed to vote speaks to the lack of durability of that turnout rise, absent the polarization which produced it. More fundamental change is needed in the education and civic education of the nation's young, in the quantity and quality of media coverage of American politics, in the rebuilding of the nation's integrating institutions, in the strength and alignment of its political parties, in the way campaigns are conducted, in the accountability and foresight of government and in the forthrightness of national leadership before there will be a durable return to a healthy civic culture. The engagement problem which has plagued American politics for four decades has not gone away.

I. GRAPHS

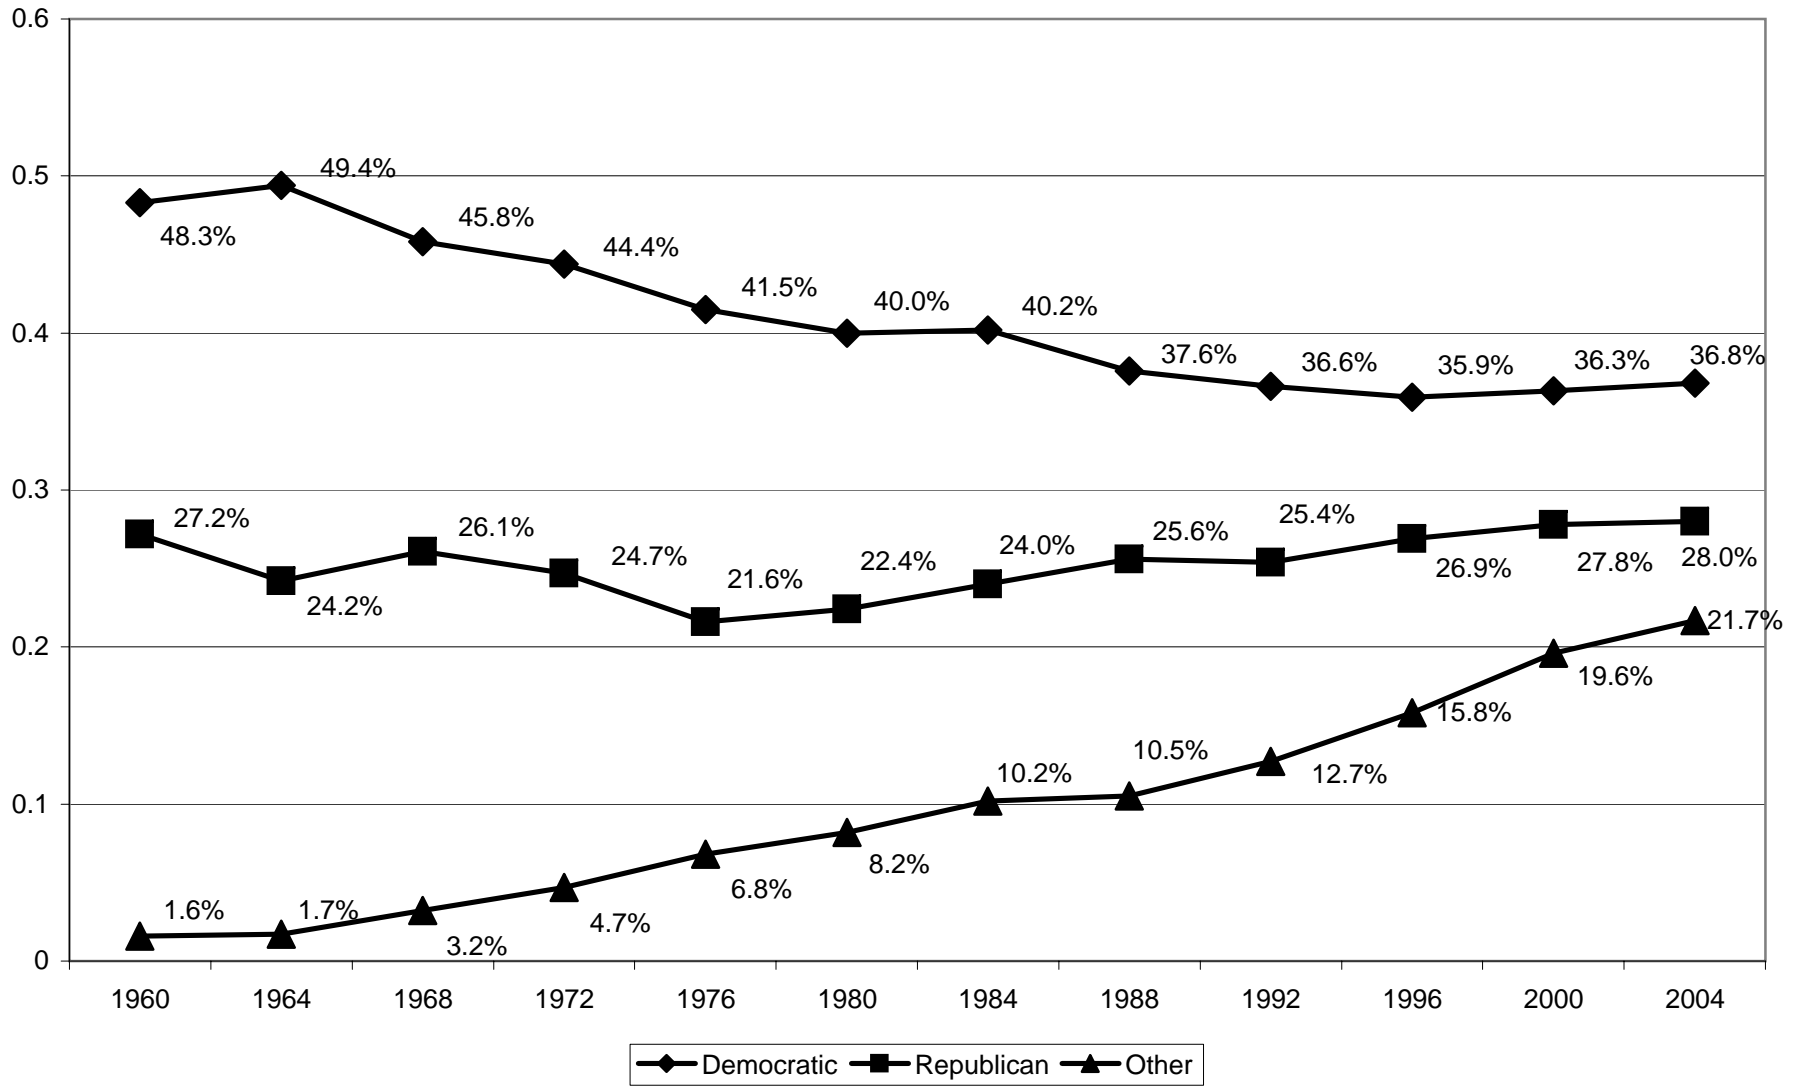

Presidential Turnout: 1960 to 2004

Partisan Share of House Vote: 1960 to 2004

Partisan Registration: 1960 to 2004

II. NOTES AND SUMMARY CHARTS

NOTES AND SUMMARY CHARTS

1. What is Turnout: Turnout should be a simple calculation in which the numerator is the number of votes cast and the denominator is the number of citizens eligible to vote. But because of various anomalies in election statistics, some of which are outlined in detail below, this calculation is more complicated. By common usage, the numerator in every Presidential election year is the vote for President (even though that tally is usually about one percentage point lower than the actual number of citizens who go to the polls. It is lower because many states, although an ever-diminishing number, do not keep records of all those who go to the polls, the total ballots cast). In mid-term elections, the numerator is the total of votes for the statewide race in each state which draws the highest number of votes and the aggregate total of votes for U.S. House of Representatives in those states which do not have statewide races. (This total tends to be between 1 and 1.5 percentage points lower than the actual total ballots cast but is used for the same reasons – that many states do not compile total ballots cast figures.)

Turnout is **NOT** the percentage of those registered who voted. There are three basic reasons for this: a. Using registration as a denominator does not account for the whole of the electorate, including those who are not registered. Thus, it gives a false picture of true citizen engagement. b. Changes in registration law can dramatically affect the figures. If the nation adopts, as it did, a registration law that provides for national mail registration, registration at motor vehicle bureaus and at social service agencies, registration will go up but turnout of those registered will decline artificially by a greater amount than it does when using the entire eligible electorate as a denominator. c. Registration figures are subject to the fluctuations of election administration. If a state conducts a thorough purge of its registration lists close to election, its registration figures will be lower and thus its percentage of registered voting will be higher. But if registration lists are not so purged, as they are not in many states, the figures for registration will be higher and the turnout based on these inflated registration figures will be lower. Consider how distorted a turnout percentage using registration as a base would be in a state such as Alaska, which because of lack of regular list cleaning and potential flaws with the Census Bureau's estimates of the state's eligible population, registration figures are regularly in excess of 100 percent of the eligible vote.

2. The Eligible Vote – The Denominator for Determining Turnout: The eligible vote in this report is the number of people residing in the United States who are 18 years of age or over minus the number of non-citizens residing in the United States who are 18 years of age and over as of November 1. It is an interpolated figure from the 2000 Census, based on the methodology outlined below.

For years, CSAE and every other reputable organization working in this field had used the Census Bureau's estimates of November age-eligible population (VAP) to determine turnout. That figure came under legitimate criticism because it included non-citizens; convicted felons (in most states) and, in some states, ex-felons; and people deemed mentally incompetent in institutions who could not vote and did not include citizens residing in other countries, citizens

naturalized during the election year and the citizen portion of the Census' undercount, all of whom could vote but were not part of the VAP estimate. The Census Bureau has ceased providing its VAP estimates.

For years also, Dr. Walter Dean Burnham, professor emeritus at the University of Texas at Austin, has been producing a denominator of age-eligible citizens (age-eligible population minus age-eligible non-citizens, interpolated by state and nation from and between decennial Censuses). After some study of this matter, CSAE has come to believe that this denominator is the best for determining turnout, subject to the caveat below. It has come to this belief because of two factors:

1. Available data. One does not determine turnout simply for any given year but also as an historical comparison with previous years. Data for several of the issues involving the inadequacy of the age-eligible population (VAP) figures are either simply not available, not available in a timely manner, not available over a given period of history or not allocatable to the states. Data on convicted and incarcerated felons is only available for a fairly recent time period. State laws on whether convicted felons and ex-felons can vote are changing and have changed over time. There is no accurate set of figures on those deemed mentally incompetent. The number of American citizens residing abroad is ascertainable but the number of age-eligible has to be estimated and there are no figures which allow the allocation of these citizens by state. Naturalization figures come in too late, often a year or two after the election year, to be usable in any current population accounting. And while any given Census undercount can be allocated by state, one can only estimate how much of that undercount is of citizens as opposed to non-citizens.

2. The balance of the figures: In studying this statistical problem, CSAE has found that the most important issue is that of non-citizens. If one wants to have a relatively accurate picture of turnout, one must eliminate the non-citizens from the age-eligible population. On the other hand, the other adjustments to the denominator would not substantially differ from the denominator of citizen age-eligible population. In pursuing its inquiry into this topic, CSAE found that the factors which would lower the denominator – felons, ex-felons and people deemed mentally incompetent who can't vote – are roughly equal to two of the factors which would increase the denominator – citizens living in other countries and naturalization who could vote. If one added a ballpark figure for the number of citizens in the undercount who could vote, the factors in those years of an undercount, other than non-citizens, which would increase the denominator exceeds those which would reduce it.

The one caveat in adopting the Burnham methodology lock, stock and barrel is that Burnham interpolates from Census to Census. These Censuses are accurate as of April 1 of each decennial year for all of the past 50 years. (In prior years, Census results captured the population as of varying months.) In order to have more accurate figures for November, CSAE has, using the same methodology, projected citizen population to November. Thus, CSAE used for reports on primaries the April figure for age-eligible citizen population, but is using the November figure for this report and any others relating to the general election.

Methodology

Since the decennial census population figures are accurate as of April 1 in each census year, the VAP Burnham dataset calculates the difference in the required census figures between a base census year and the same figures as reported in the following census. To estimate the voting age population for the years between the censuses, the difference between them is simply multiplied by the number of months that have passed beyond April 1 of the base year and then added to the base year figure. For example, to arrive at the April 1, 1992 voting age population, the difference between the April 1, 1990 census population and the April 1, 2000 census population is multiplied by 24/120ths (for the 24 out of 120 months between the census counts) and added to the April 1, 1990 figure.

The process for arriving at the CSAE November Eligible figures is the same, except that the data is projected forward to November instead of April. To accomplish this, the multiplier is simply changed to the number of months that have passed since April of the base census year. For instance, to calculate the November 1996 voting age population, the difference between April 1, 1990 and April 1, 2000 is multiplied by 79/120ths and added to the April 1, 1990 count. The same interpolation process is applied to the decennial census counts of non-citizens of voting age in each state. Once estimates of the total voting age population and the non-citizen voting age population for each state have been calculated, the non-citizen figure is simply subtracted from the total to arrive at the appropriate figure.

Since the last decennial census occurred in 2000, it is necessary to project the figures forward to arrive at the voting age population for 2002 and 2004. To accomplish this, the difference between the 1990 and 2000 decennial censuses is used to establish a rate of growth. This rate of growth is then used to project forward based on the number of months passed since April 1990 out of the 120 months between the censuses. For instance, to obtain the voting age population for April 2004, the difference between April 1, 1990 and April 1, 2000 is multiplied by 168/120 and added to the April 1, 1990 total.

3. Registration: The registration figures for the individual states in the back of this report are final, official, certified by the chief election officer of each state and totally misleading.

In any given election the official registration figures provided by the states are inaccurate because they contain the names of people who have either died or moved but have not been removed from the registration rolls. The degree of inaccuracy in any given state would pend both on when they conducted a list cleaning and how thorough such a list cleaning was. A state which conducted a thorough list cleaning close to an election would likely have fewer names that were not eligible. But because of non-thorough and early list cleaning, some states, notably Alaska, Maine and Mississippi, often have registration rolls which exceed 100 percent of the Voting Age Population. Prior to the enactment of the NVRA, it was at least possible to make a national estimate of registration which would be, on the average, ten percent lower than the official figures provided by the states.

But the NVRA mandated that states must keep even those who have moved or died on their registration rolls for at least two federal elections, even if the people whose names have remained

on the rolls have been determined to have moved or died. And, this, in turn, accounts for the substantially higher official figures than prior to the NVRA's implementation.

While states cannot remove names, they can transfer those for whom they have evidence have died or moved to an inactive list, which they are required by the NVRA to report each biennium by March of the year following a national election. A truer picture can be gleaned from the chart below which compares registration rates based on official figures and rates based on official figures minus those kept on inactive lists. The charts on registration and partisan registration in the summary charts below represent the Committee's best estimate of what actual registration is likely to be, based on the states which have provided final and official registration figures at the time of this report. (Three additional considerations when looking at these statistics: 1. Only 28 states and the District of Columbia have partisan registration and the partisan registration percentages estimated below are based on the raw registration figures. There are no similar corrective inactive lists for partisan registrants and it is likely that were there, the estimates for partisan registration percentages below would be smaller in each category. 2. The percentages of Democratic, Republican and Other registrations do not add up to 100 percent. The balance are unregistered. 3. The partisan percentages are taken from raw official data and thus do not yield the same totals as do the overall percentages).

(Note: Four states are not included in the registration charts: North Dakota which has no registration, Wisconsin which never compiles state-wide figures, Maine which will complete its registration count next month, and Mississippi which will only provide a count when it files its report with inactive lists in March to the FEC. The inactive lists included above are the only ones which have been compiled as of this report).

4. The Votes: The vote totals for 2004 in this report are final and official and certified by the chief election officer in each state and the District of Columbia. All figures for previous years are final, official, certified by the chief election officer in each state and checked against other historical records. The national turnout figure is an aggregate of the state totals.

The Presidential vote upon which all historic turnout records are based somewhat understates actual turnout. In all years, there are citizens who cast ballots and do not vote for President or cast invalid ballots. Only 31 states provide a figure for total ballots cast, but, in quadrennial comparisons between Presidential vote and total vote, the difference is usually around one percentage point. This year, because of the intense feelings surrounding the Presidential race, this differential is smaller, 0.57 of the citizen-eligible vote. In addition, in a few states the vote totals for individual Senate and governor's races exceed that for President – a smaller number this year than in previous years.

There are eight states in 2004 which have races for both governor and U.S. Senator – Indiana, Missouri, New Hampshire, North Carolina, North Dakota, Utah, Vermont and Washington. CSAE uses the race with the highest turnout for its analysis.

There are 32 uncontested races for U.S. House of Representative and 31 others in which the only competition is from minor parties. If history is any guide some states will not count the votes in these races on election night and thus the figures in this report for votes for House of Representatives are likely to be somewhat understated. The states will have to report their vote totals by December to the Clerk of The House.

Even with these difficiencies, CSAE uses the House votes to measure historic partisan turnout and turnout by region as the most consistent measure.

In CSAE's regional analysis, Texas is included as both a Southern and Southwestern state.

5. Acknowledgments: Primary research for this report was done by Mark P. Harvey, CSAE research associate, who is also responsible for creating the denominator database for the analysis of November turnout. Organizing the analysis for this report was made profoundly easier by a custom database program developed by Samuel Schreiber, CSAE research associate emeritus. CSAE would also like to express its profound gratitude to Dr. Walter Dean Burnham, professor emeritus at the University of Texas at Austin, for sharing his database, helping to devise CSAE's new November denominator for the analysis of registration and turnout and for his continuing help to

CSAE's work. The Committee is also grateful to all the state election officials for graciously yielding their registration and voting figures after an unconscionable amount of hounding by CSAE's staff.

6. Culpability: The analysis contained in this report has been done by Curtis Gans, CSAE's director, who is solely responsible for any and all errors contained within.

SUMMARY CHARTS

1. Turnout Trend: The number percentage of eligible citizens who voted for President in elections since 1924:

YEAR	Citizens Eligible	Vote	Percent of Eligible Voted
2004	201,541,000	122,265,430	60.7
2000	194,285,000	105,399,313	54.3
1996	187,033,000	96,277,872	51.5
1992	179,775,000	104,428,377	58.1
1988	172,540,000	91,594,805	53.1
1984	165,341,000	92,653,000	56.0
1980	158,143,000	86,497,000	54.7
1976	147,980,000	81,603,000	55.1
1972	137,318,000	77,625,000	56.6
1968	118,243,000	73,212,000	61.9
1964	112,415,000	70,645,000	62.8
1960	106,098,000	68,838,000	64.9
1956	101,311,000	62,033,908	61.2
1952	97,064,000	61,551,919	63.4
1948	91,545,000	48,833,680	53.3
1944	82,220,000	48,025,684	58.4
1940	76,372,000	49,815,312	65.2
1936	73,369,000	45,646,817	62.2
1932	70,604,000	39,816,522	56.3
1928	64,426,000	36,879,414	57.2
1924	59,503,466	29,091,417	48.9

2. Shares of the total vote: The share of the total vote each candidate received:

<u>YEAR</u>	<u>DEMOCRATS</u>	<u>REPUBLICANS</u>	<u>OTHERS</u>
2004	48.3	50.8	0.9
2000	48.4	47.9	3.7
1996	49.2	40.7	10.0
1992	43.0	37.4	19.5
1988	45.6	53.4	1.0
1984	40.5	58.7	0.7
1980	41.0	50.8	8.2
1976	50.1	48.0	1.9
1972	37.5	60.7	1.8
1968	42.7	43.4	14.0
1964	61.1	38.5	0.5
1960	49.7	49.6	0.7

3. Share Of Eligible Vote: The percentage of the eligible vote garnered by each major party and all others in the votes cast for President:

YEAR	Democratic	Republican	Other
2004	29.2	30.8	0.6
2000	26.3	26.0	2.0
1996	25.3	21.0	5.2
1992	25.0	21.8	11.4
1988	24.2	28.3	0.5
1984	22.7	32.9	0.4
1980	22.4	27.8	4.5
1976	27.6	26.5	1.1
1972	21.2	34.4	1.0
1968	26.5	26.9	8.6
1964	38.6	24.2	0.2
1960	32.3	32.2	0.6

4. Partisan Share of House Vote: The percentage of the citizen eligible vote which voted for each major party nationally for all candidates for U.S. House of Representatives – understanding that 32 uncontested races this year (and a lesser amount in years past; and 31 races this year which have only minor party opposition) may have not been counted:

YEAR	Democratic	Republican
2004	26.1	28.0
2000	24.0	24.2
1996	23.4	23.6
1992	27.2	24.4
1988	25.4	21.7
1984	26.1	23.5
1980	24.9	23.7
1976	28.3	21.2
1972	26.8	24.0
1968	28.3	27.3
1964	33.8	24.9
1960	33.1	27.4

5. Overall Registration: The chart below represents CSAE's best estimate of the percentage of the citizen eligible vote which will be registered in 2004 and were registered in previous years, adjusting for all the problems in registration lists outlined in Note 3 above:

Year	Estimated Number and Percent Registered	
2004	143,000,000	71.0
2000	133,780,000	68.0
1996	132,000,000	70.0
1992	123,649,000	68.4
1988	116,820,000	67.0
1984	114,750,000	68.8
1980	103,500,000	65.9
1976	95,850,000	66.0
1972	92,700,000	68.7
1968	81,000,000	70.3
1964	78,300,000	72.1
1960	74,250,000	70.9

2. Partisan Registration Trend: Estimated partisan registration based on raw final and official registration figures available at the time of this release. The other category includes those registered for parties other than the Democratic and Republican parties and those who register without affiliation or as independents.

Year	Democratic	Republican	Other
2004	36.8	28.0	21.7
2000	36.3	27.8	19.6
1996	35.9	26.9	15.8
1992	36.6	25.4	12.7
1988	37.6	25.6	10.5
1984	40.2	24.0	10.2
1980	40.0	22.4	8.2
1976	41.5	21.6	6.8
1972	44.4	24.7	4.7
1968	45.8	26.1	3.2
1964	49.4	24.2	1.7
1960	48.3	27.2	1.6
